### Number of Orders By Hour of Day

### Number of Orders By Weekdays

### Vehicle Utilization and Weather Impact on Urban Deliveries

- Area-to-Vehicle Insights: If electric scooters have a wider band coming from Urban areas, it might suggest a preference or higher usage of electric scooters in Urban deliveries.
- Vehicle-to-Weather Insights: Motorcycles might be more commonly used in Sunny weather, indicating a potential preference for motorcycles when the weather is clear.
- Distribution of Deliveries: If one of the area bands is significantly thicker than the others, it shows that area has a higher overall number of deliveries. Similarly, for the weather conditions, a thicker band might indicate that more deliveries occur during certain weather conditions.
- Operational Considerations: The flow sizes may reflect operational considerations, such as the suitability of certain vehicle types for specific weather conditions, or the adaptability of delivery services to weather changes.
